# Lecture \# 1 <br> Chapter 11.01: Introduction to Fourier Series 

Major: All Engineering Majors

Authors: Duc Nguyen
http://numericalmethods.eng.usf.edu
Numerical Methods for STEM undergraduates

## Background

The following relationships can be readily established

$$
\begin{align*}
& \int_{0}^{T} \sin \left(k w_{0} t\right) d t=\int_{0}^{T} \cos \left(k w_{0} t\right) d t=0  \tag{1}\\
& \int_{0}^{T} \sin ^{2}\left(k w_{0} t\right) d t=\int_{0}^{T} \cos ^{2}\left(k w_{0} t\right) d t=\frac{T}{2} \tag{2}
\end{align*}
$$

## Background cont.

$$
\begin{align*}
& \int_{0}^{T} \cos \left(k w_{0} t\right) \sin \left(g w_{0} t\right) d t=0  \tag{3}\\
& \int_{0}^{T} \sin \left(k w_{0} t\right) \sin \left(g w_{0} t\right) d t=0  \tag{4}\\
& \int_{0}^{T} \cos \left(k w_{0} t\right) \cos \left(g w_{0} t\right) d t=0 \tag{5}
\end{align*}
$$

## Background cont.

$$
\begin{align*}
& w_{0}=2 \pi f  \tag{6}\\
& f=\frac{1}{T} \tag{7}
\end{align*}
$$

Where $f$ and $T$ represents the frequency in (cycles/time) and period (in seconds) respectively.
A periodic function with a period $T$ should satisfy the following equation:

$$
\begin{equation*}
f(t+T)=f(t) \tag{8}
\end{equation*}
$$

## Background cont.

## Example 1

Let

$$
\begin{align*}
A & =\int_{0}^{T} \sin \left(k w_{0} t\right) d t  \tag{9}\\
& =-\left(\frac{1}{k w_{0}}\right)\left[\cos \left(k w_{0} t\right)\right]_{0}^{T}
\end{align*}
$$

## Background cont.

$$
\begin{aligned}
A & =\left(\frac{-1}{k w_{0}}\right)\left[\cos \left(k w_{0} T\right)-\cos (0)\right] \\
& =\left(\frac{-1}{k w_{0}}\right)[\cos (k 2 \pi)-1] \\
& =0
\end{aligned}
$$

## Background cont.

Example 2

$$
\begin{equation*}
\text { Let } B=\int_{0}^{T} \sin ^{2}\left(k w_{0} t\right) d t \tag{11}
\end{equation*}
$$

Recall

$$
\begin{gather*}
\sin ^{2}(\alpha)=\frac{1-\cos (2 \alpha)}{2}  \tag{12}\\
B=\int_{0}^{T}\left[\frac{1}{2}-\frac{1}{2} \cos \left(2 k w_{0} t\right)\right] d t \tag{13}
\end{gather*}
$$

## Background cont.

$$
\begin{align*}
& =\left[\left(\frac{1}{2}\right) t-\left(\frac{1}{2}\right)\left(\frac{1}{2 k w_{0}}\right) \sin \left(2 k w_{0} t\right)\right]_{0}^{T} \\
B & =\left[\frac{T}{2}-\frac{1}{4 k w_{0}} \sin \left(2 k w_{0} T\right)\right]-[0] \tag{14}
\end{align*}
$$

## Background cont.

$$
\begin{aligned}
=\frac{T}{2} & -\left(\frac{1}{4 k w_{0}}\right) \sin (2 k * 2 \pi) \\
& =\frac{T}{2}
\end{aligned}
$$

Example 3
Let

$$
\begin{equation*}
C=\int_{0}^{T} \sin \left(g w_{0} t\right) \cos \left(k w_{0} t\right) d t \tag{15}
\end{equation*}
$$

## Background cont.

Recall that
$\sin (\alpha+\beta)=\sin (\alpha) \cos (\beta)+\sin (\beta) \cos (\alpha)$
(16)
$C=\int_{0}^{T}\left[\sin \left[(g+k) w_{0} t\right]-\sin \left(k w_{0} t\right) \cos \left(g w_{0} t\right)\right] d t \quad(17)$

## Background cont.

$$
=\int_{0}^{T} \sin \left[(g+k) w_{0} t\right] d t-\int_{0}^{T} \sin \left(k w_{0} t\right) \cos \left(g w_{0} t\right) d t(18)
$$

$$
\begin{equation*}
C=0-\int_{0}^{T} \sin \left(k w_{0} t\right) \cos \left(g w_{0} t\right) d t \tag{19}
\end{equation*}
$$

Adding Equations (15), (19),

$$
\begin{align*}
2 C & =\int_{0}^{T} \sin \left(g w_{0} t\right) \cos \left(k w_{0} t\right) d t-\int_{0}^{T} \sin \left(k w_{0} t\right) \cos \left(g w_{0} t\right) d t \\
& =\int_{0}^{T} \sin \left[\left(g w_{0} t\right)-\left(k w_{0} t\right)\right] d t=\int_{0}^{T} \sin \left[(g-k) w_{0} t\right] d t \tag{20}
\end{align*}
$$

## Background cont.

$$
2 C=0,
$$

since the right side of the above equation is zero Thus,

$$
\begin{equation*}
C=\int_{o}^{T} \sin \left(g w_{0} t\right) \cos \left(k w_{0} t\right) d t=0 \tag{21}
\end{equation*}
$$
